DETAILED ACTION

Allowable Subject Matter

1. Claims 1-10, 12-16 (renumbered as 1-15) are allowed. Regarding claim 1, the prior art of record does not disclose a server disposed in a packet network to repeat a packet between a first terminal and a second terminal such that a session managing unit stores a first address of the first related to a first session and a second address of the first terminal related to a second session representing a connection status between the server and the first terminal, wherein the session managing unit stores the first and second sessions before switching, further comprising a receiving unit receiving packet user data from the second terminal, further comprising a switching unit that switches from the first and second sessions based on the first and second addresses, further comprising a transmitting unit to transmit the packet using the second session, further comprising the first terminal stopping transmission of a packet for packet communication with the server according to a first instruction from the server and switches according to a subsequent instruction and starts transmitting a packet. Analogous reasoning applies to other independent claims 7, 8, 12, 13, 15 and 16.
